Current City: Guangzhou | Hometown: Jiujiang, Jiangxi | Birthdate: 2005-06
Preferred name: Noah Zhou

Education Background

South China University of Technology, "Software Engineering + Business Administration" Dual Degree Pilot Program, *Bachelor* 2023.9 - 2027.6

- Weighted Average Score: 92.13/100 **(Ranked 1st in Grade)**, GPA: 3.95/4.00 **(Ranked 1st in Grade)**
- Major Courses: Data Structures(95), Comprehensive Software Development Training(96), Advanced C++ Programming(90), Database System(94), Discrete Mathematics(94), Engineering Mathematical Analysis(93), Engineering Graphics(93), College Physics(100), Probability and Statistics(96), Circuit and Electronic Technology(99), Corporate Finance(98), Microeconomics(87), Macroeconomics(94), Principles of Management(91), etc.
- **IELTS overall: 8.0/9.0** , CET-4: 632/710, CET-6: 642/710
- Attended 2024 International Conference on Computer Science, Electronic Information Engineering and Intelligent Control Technology (CEI2024) and 2025 Annual Conference on Intelligent and Computational Communication.
- **Awarded tuition-free place in HKUST Summer School 2025 (English-taught, 4 spots university-wide)**.

Project Experience

Interdisciplinary Research on News Communication and Large Models 2024.5 - Present

- *Introduction*: Under supervisor guidance, conducted interdisciplinary research on news dissemination and large models, including LLM value alignment, multimodal fake news detection, multi-task fake news detection models, agent-based news dissemination simulation, sentiment analysis, hallucination research, and text readability analysis.
- *My Responsibility*: 1) Core work: Agent simulation of news dissemination process, designing intervention experiments and ablation studies. Innovatively implemented a multi-functional machine learning fake news detection model. 2) Supporting work: Used Python for web scraping to collect news from domestic and international websites, utilized large AI models for batch content summarization and value system analysis, gained experience with various neural network frameworks and popular deep learning architectures, participated in writing research background and related knowledge sections of papers. 3) Competition participation: Participated in social simulation competition, involved in prompt design and cloud-based distributed deployment of project code.
- *Achievements and Gains*: Contributed to paper writing; **An authored paper about MoE fake news detection has been accepted by IEEE TCE.** (https://doi.org/10.1109/TCE.2026.3677445), one paper on counterfactual software defect detection is under review and one paper on multi-task fake news detection is in progress.; produced open-source projects including https://github.com/KGoinger/WeSpeak, https://github.com/NoahIsARider/Reptile, patent pending

AIGC Medical Case Generation Project 2024.7 - 2024.12

- *Introduction*: Project uses generative AI to generate formatted medical records, focusing on solving issues of repetitive labor, timeliness delays, and uneven quality in medical record writing. Through in-depth research on medical dialogues and advanced AIGC algorithms, aims to achieve automated and intelligent generation of outpatient medical records.
- *My Responsibility*: 1. Participated in early-stage speech-to-text work (using Whisper model), Qwen model fine-tuning, and prompt engineering. 2. Set up local proxy and firewall access. 3. Conducted batch testing and effect adjustment of mid-stage data.
- *Achievements and Gains*: Project context later shifted to mental health departments. Through this project, connected with excellent senior students and maintained subsequent cooperation and communication. Enriched experience working in cross-functional and highly structured teams.

Participated in Wanbang Xingxing Charging Technology charging pile site selection project within the same research group, summarized CSLP model from review paper and presented findings.

Mining Simulation and Analysis of Tourism Trajectory Data 2025.8 - Present

- *Introduction*: Project built a visitor behavior simulation platform based on Python and Vue using official platform data combined with web crawler data, exploring whether tourists' travel route choices are influenced by social media platforms.
- *My Responsibility*: Implemented time filtering function and improved data visualization module, achieved important functional modules including multi-day repeated population addition and temporary scenic spot closure.
- *Achievements and Gains*: Project expected to produce at least one paper; enriched practical software system development experience, helped learn how to adapt to high-demand development standards.

ZhituCareer+ Project & AIFrameQuest Image Search Series 2025.5 - 2025.7

- *Introduction*: Project from Software Requirements Analysis & Modeling and Software Development Training course, 6-member team with **myself as team leader**. ZhituCareer+ is a web-based career planning platform featuring multi-agent decision making. AIFrameQuest is a modern community discussion platform based on Flask and Vue, supporting user authentication, content management, image search (Faiss vector search and Bert feature extraction), with modern and elegant design. Two spin-off projects:

ReminisceneStone (UGC-based memory recording and resonance platform) and MoonPit (professional image management and search platform supporting self-built image databases). Tech stack: Python/Flask/JavaScript/MySQL/Vue

- *My Responsibility*: Responsible for module integration, participated in front-end design and conceptual design, arranged reasonable work allocation for team. Demonstrated ability to capture user requirements, aesthetic design capability, and experience leading software development teams.
- *Achievements and Gains*: Achieved first place in course, produced open-source projects: https://github.com/NoahIsARider/AIFrameQuest, https://github.com/NoahIsARider/ZhituCareer

Agricultural Automatic Evaluation R&D Project 2025.7 - 2026.2

- *Introduction*: Project uses computer vision to achieve efficient evaluation of livestock breeding effects, built independently developed data annotation platform, achieved target weight recognition through training YOLO series models.
- *My Responsibility*: Conducted research and code implementation on keyframe recognition algorithms, used YOLOn11pose model to solve challenges in livestock body keypoint identification.
- *Achievements and Gains*: Data annotation platform delivered for enterprise acceptance in December 2025, algorithms still in iterative phase. Enriched knowledge reserve and practical experience in computer vision field.

Technical Skills

Programming Languages: C++(Solid), Java(Fluent), Python(Proficient in data crawling and deep learning), MySQL(Fluent)

Technical Frameworks: Flask, Vue, Docker, Deep Learning Frameworks, Distributed Architecture, RPC(https://github.com/NoahIsARider/DLFaceDetection)

Language Skills: Fluent English (IELTS overall: 8.0/9.0), Basic German (Duolingo reached S3U22, completed SCUT "German Oral Communication" course)

Other Skills: Proficient in AI-assisted programming with rich experience (familiar with Trae, Copilot and Claude Codeand methodology; capable of video editing and music production; skilled in Office software (especially PPT drawing); Piano Grade 10 certificate

Awards and Honors

Motivational Student Award, Hua Xun ・Yun Jie Scholarship	2023.09
Outstanding Individual, 2023-2024 SCUT Student Military Training	2024.01
First Place, ModelScope Community Large Model Application Development Practical Team	2025.02
First Prize, Guangdong Region, 2025 "Shenzhen Cup" Mathematical Modeling Challenge	2025.06
First Prize, Guangdong Region, 2025 National Mathematical Modeling Competition	2025.10
National Finalist, 2025 China International College Students Innovation Competition	2025.10
Meritorious Winner, 2026 COMAP's Interdisciplinary Contest in Modeling (ICM)	2026.05

Extracurricular Activities

CC Film Club - Projection Team Leader 2023.9 - Present

- *Introduction*: Responsible for weekly film selection, organizing theme month screenings, etc.
- *My Responsibility*: Participated in organization and on-site coordination of Guangzhou university joint film viewing events (approx. 200 participants each), wrote articles for film association WeChat public account, participated in short video production and interview activities.
- *Achievements and Gains*: Enhanced aesthetic ability and organizational coordination skills.

Personal Douban homepage: https://www.douban.com/people/227017213

Personal Summary

- **Work Soft Skills**: Good with people,e xcel in team collaboration, possess strong organizational skills and emotional intelligence, high stress tolerance
- **Broad Knowledge Base**: Deeply studied interdisciplinary knowledge including neuroscience, anthropology, philosophy, game theory
- **Career Direction**: Hope to continuously engage with cutting-edge technologies, bring positive work experience to teams, achieve mutual empowerment between individuals and organizations
